

MID VALLEY DISPOSAL COMPOST FACILITY

The use of recycled food waste as compost improves soil health, structure and increases drought resistance.

Produce organic compost within 8 weeks in 3 phases.

Uses food/green materials from exiting collection routes.

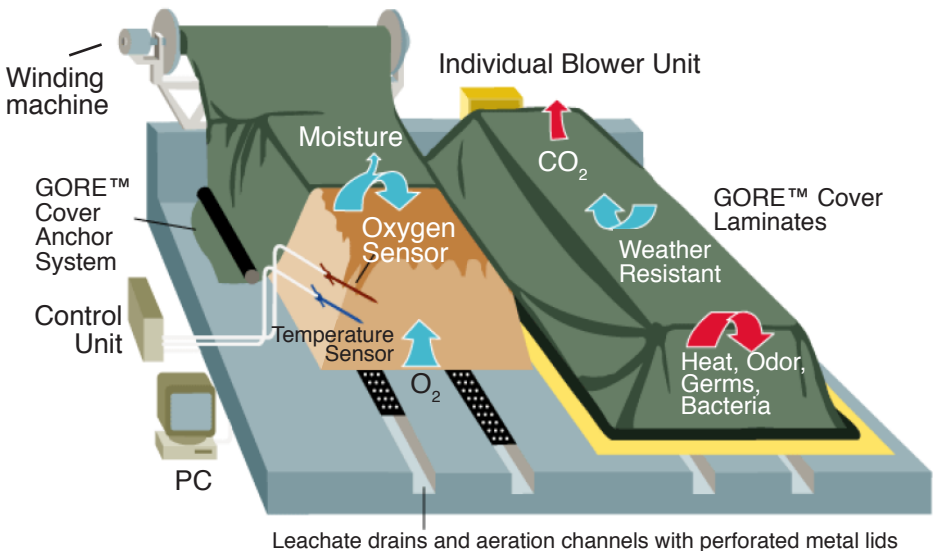

Composting is an environmentally friendly alternative over the landfill for disposing of organic waste because it reduces GHG emissions.

Produce valuable product for agriculture – CDFA “Organic” certification.

Will reduce greenhouse gas emissions by 150,000 metric tons of CO₂.

Will divert 42,000 tons from landfill each year at build out; 290,000 tons over 10 years.
